# Azure App Service

A fully managed platform for building, deploying and scaling your web apps

Enabling productivity and innovation for over 2 million apps and sites on Azure

Quickly build, deploy, and scale web apps and APIs on your terms. Work with .NET, .NET Core, Node.js, Java, Python or php, in containers or running on Windows or Linux. Meet rigorous, enterprise-grade performance, security and compliance requirements used a trusted, fully managed platform that handles over 40 billion requests per day.

Fully managed platform

Built-in infrastructure maintenance, security patching, and scaling

Built-in CI/CD integration

CI/CD integration provides zero-downtime deployments

Virtual network integration

Ability to run in an isolated and dedicated App Service environment

Rigorous security and compliance

Seamless deployments across public cloud, Azure Government, and on-premises environments
